

Business Intelligence Labwork 1

Question 1

a)

49, 74, 48, 63, 35, 85, 69, 84, 72, 88, 99, 95.

19, 35, 48, 63, 69, 71, 72, 81, 85, 88, 95, 99

1) $W = (\max - \min) / k = (99 - 19) / 3 = 27$ | intervals 19 to 46, 47 to 73, 74 to 100

Bin1: 19, 35, 48, 63

Bin2: 69, 71, 72, 81

Bin3: 85, 88, 95, 99

2)

Bin1: 19, 35 [19 - 46]

Bin2: 48, 63, 69, 71, 72 [47 - 73]

Bin3: 81, 85, 88, 95, 99 [74 - 100]

b)

Max: 99

Min: 19

Medium: 72

19, 35, 48, 63, 69, 71 72 72, 81, 85, 88, 95, 99
Q1 Medium Q3

$Q1 = (63 + 48) / 2 = \underline{56}$

$Q2 = (88 + 85) / 2 = \underline{87}$

c)

d)

Mean: $825 / 12 = \underline{69}$

Standard Deviation:

$$(19 - 69)^2 = 2500$$

$$(35 - 69)^2 = 1156$$

$$(48 - 69)^2 = 441$$

$$(63 - 69)^2 = 36$$

$$(69 - 69)^2 = 0$$

$$(71 - 69)^2 = 4$$

$$(72 - 69)^2 = 9$$

$$(81 - 69)^2 = 144$$

$$(85 - 69)^2 = 256$$

$$(88 - 69)^2 = 361$$

$$(95 - 69)^2 = 676$$

$$(99 - 69)^2 = 900$$

Add all values: $6483 / 12 = 540.25 = 540$

Square root: Standard Deviation = $s = \underline{23}$

Question 2

13, 15, 16, 16, 19, 20, 20, 21, 22, 22, 25, 25, 25, 25, 30, 33, 33, 35, 35, 35, 36, 40, 45, 46, 52, 70.

a)

$$\text{Mean} = 752 / 26 = \underline{29}$$

$$\text{Median} = \underline{25}$$

b)

Mode = 25. There are four values which are 25.

Bi-Modality: There is not 2 values which was found in an equal amount of instances.

Tri-Modality: There is not 3 values which was found in an equal amount of instances. 16, 20, 22 and 33 were found in the same amount of instances but that is four values.

c)

$$\text{Min: } \underline{13}$$

$$\text{Max: } \underline{70}$$

$$\text{Range: } 70 - 13 = \underline{57}$$

d)

$$Q1 = \underline{20}$$

$$Q3 = \underline{35}$$

$$\text{IQR} = 35 - 20 = \underline{15}$$

e) FNS:

$$\text{Min: } \underline{13}$$

$$Q1: \underline{20}$$

$$\text{Median: } \underline{25}$$

$$Q3: \underline{35}$$

$$\text{Max: } \underline{70}$$

f) Box plot

g) Histogram
